PRODUCT: **Aquamine 406**

DESCRIPTION:

Aquamine 406 is a concentrated blended liquid treatment formulated to prevent low pH corrosion (grooving) in condensate recovery systems. This product has a low distribution ratio and is best suited to applications with relatively short steam distribution and condensate recovery systems.

SPECIFICATIONS:

Specific Gravity: 1.0
Colour:..... Clear Colourless Liquid
pH:..... 12.5
Odour: ..... Strong Amine

APPLICATION AND CONTROL:

Aquamine 406 can be fed neat as received or diluted with soft water to any convenient strength. Aquamine 406 is compatible with most boiler treatment chemicals and can normally be added in a common mix tank. Feed rates will vary depending on feedwater quality. Sufficient treatment should be used to maintain a mildly alkaline pH in all portions of the condensate recovery system. Treatment additions should be continuous, proportionate to make-up or feedwater.

PACKAGING:

20 Kg..... Pails
205 Kg..... Drums
1000 Kg..... Totes

PRECAUTIONS:

- Avoid all contact with skin, eyes and clothing.
- Wear gloves, safety goggles/face shield and other protective clothing.
- Avoid excessive inhalation of vapours.
- Consult M.S.D.S. and product label for additional information before handling.
