PRODUCT: **Aquapro 902**

DESCRIPTION:

Aquapro 902 is a concentrated organic acid based solution developed for use as a pH depressant and alkalinity neutralizer in closed aqueous heat exchange systems and other water systems. Aquapro 902 is environmentally friendly, biodegradable and much safer to handle than traditional inorganic acids. Aquapro 902 is formulated to maximum strength and will out-perform most available organic acid solutions. Aquapro 902 does not generate the fumes and other hazards normally associated with handling strong acids.

SPECIFICATIONS:

Specific Gravity: 1.23
Colour:.....Clear Colourless
pH:.....<2
Odour: .....Virtually Odourless

APPLICATION AND CONTROL:

Aquapro 902 is recommended for use in recirculating water systems where pH reduction is required with minimal impact on the conductivity of the circulating water and the system metallurgy. In other applications the relative handling safety and lack of negative environmental impact make it ideal. Aquapro 902 may be added full strength or diluted with water to any convenient concentration. Aquapro 902 can be slug fed as required or feed can be automated with a pH regulating/control system. Please consult your service provider for specific recommendations.

PACKAGING:

25 Kg..... Poly Pails
252 Kg..... Non-returnable Poly Drums
1230 Kg ..... Returnable Poly-Totes

PRECAUTIONS:

- Do not take internally.
- Do not freeze.
- Wear gloves and chemical goggles when handling.
- Mild skin irritation.
- Consult label and MSDS before use.
