PRODUCT: **Aquasolv 721**

DESCRIPTION:

Aquasolv 721 is a powdered inhibited sulfamic acid based product formulated to remove deposits from mild steel, stainless steel, copper, brass & galvanized surfaces. In addition to inhibitors it contains a foam suppressant and a dispersant penetrant to assist in penetration and dispersal of unreactive portions of deposits. Aquasolv 721 is particularly effective in applications where deposits contain a significant percentage of carbonaceous material.

SPECIFICATIONS:

Specific Gravity: .....NA
Colour:.....Light brown powder
pH:.....Less than 1.0 (1% solution)
Odour: .....Musty

APPLICATION AND CONTROL:

Aquasolv 721 is designed for use primarily in boilers or other systems where scale or deposit removal is required. The amount of Aquasolv 721 required will depend on the system volume as well as the amount and composition of the deposit to be removed.

PACKAGING:

25 Kg.....Pails
260 Kg.....Drums

PRECAUTIONS:

- Extremely corrosive.
- Avoid breathing dust.
- Prevent all contact with skin, eyes, and clothing.
- Use only with adequate ventilation.
- Consult M.S.D.S. and product label before handling.
