

PRODUCT: Aquasolv 722

DESCRIPTION:

Aquasolv 722 is an inhibited phosphoric acid based cleaner. Aquasolv 722 contains effective inhibitors for steel and copper as well as a foam suppressant and a dispersant - penetrant to assist in penetration and dispersal of unreactive portions of deposits. Aquasolv 722 is particularly effective in applications where deposits contain a significant percentage of hard water based material. As opposed to most types of acid cleaners Aquasolv 722 tends to produce a protective film on exposed metal surfaces and virtually eliminates flash rusting.

SPECIFICATIONS:

Specific Gravity: 1.23
Colour:..... Bright Pink
pH:..... Less than 1.0
Odour: Virtually odourless

APPLICATION AND CONTROL:

Aquasolv 722 is designed for use primarily in vessels or systems where scale or deposit removal is required. The amount of Aquasolv 722 required will depend on the system volume as well as the amount and composition of the deposit to be removed. Recommended dilution use rates vary from 10 – 40%. As with any chemical reaction heat will facilitate the cleaning process.

PACKAGING:

24 Kg..... Pails
245 Kg..... Drums
1230 Kg..... Totes

PRECAUTIONS:

- Extremely corrosive.
- Prevent all contact with skin, eyes, and clothing.
- Use only with protective clothing.
- Consult M.S.D.S. and product label before handling.
