

**PRODUCT: Aquasperse 500**

**DESCRIPTION:**

Aquasperse 500 is a blended liquid organic treatment formulated for use in open and closed recirculating water systems where suspended solids or deposits are a problem. Aquasperse 500 is an effective dispersant which will control most inorganic water formed suspended solids as well as organic contaminants. In many cases this material will also remove existing deposits through re-suspension and normal system bleed off. Aquasperse 500 is particularly effective in penetrating bio and oil films and facilitating their removal. Aquasperse 500 will also enhance performance in non-oxidizing biocide programs.

**SPECIFICATIONS:**

Specific Gravity: ..... 1.00  
Colour:..... Hazy, yellow liquid  
pH:..... 7.2  
Odour: ..... Light ethereal

**APPLICATION AND CONTROL:**

Aquasperse 500 can be slug fed or metered into the system. Aquasperse 500 is compatible with most blended corrosion and scale inhibitors and can usually be added with the regular treatment program. Feed rates will vary depending on the severity of the solids loading and the type and amount of deposition in the system.

\* **Note** \* Check the compatibility of Aquasperse 500 with other chemicals before mixing.

**PACKAGING:**

20 Kg..... Pails  
205 Kg..... Drums  
1250 Kg..... Totes

**PRECAUTIONS:**

- For industrial, institutional and commercial use only.
- Avoid contact with skin, eyes, and clothing.
- Not for use in potable water systems.
- Consult M.S.D.S. and product label before handling.
